

## PART I. The Core Science of Endodontics

### 1. Diagnosis

References

### 2. Radiographic interpretation

Joint Position Paper References

References

### 3. Lesions that mimic endodontic pathosis

References

### 4. Diagnosis of the nonodontogenic toothache

References

### 5. Case assessment and treatment planning

References

### 6. Pain control

Local anesthesia

Analgesics and therapeutic recommendations

References

### 7. Tooth morphology and pulpal access cavities

References

### 8. Cleaning and shaping of the root canal system

References

### 9. Obturation of the cleaned and shaped root canal system

References

### 10. Nonsurgical retreatment

References

### 11. Periradicular surgery

References

### 12. Regenerative endodontics

References

## PART II. Advanced Science Topics

### 13. Structure and functions of the dentin-pulp complex

References

### 14. Pulp reactions to caries and dental procedures

References

### 15. Microbiology of endodontic infections

References

### 16. Pathobiology of apical periodontitis

References

## PART III. Advanced Clinical Topics

### 17. Evaluation of outcomes

References

Figure and Table References

### 18. Root resorption

References

### 19. Management of endodontic emergencies

References

### 20. Managing iatrogenic events

References

### 21. The role of endodontics after dental traumatic injuries

References

### 22. Chronic cracks and fractures

References

23. Restoration of the endodontically treated tooth

References

24. Vital pulp therapy

References

25. Endo-perio

References

PART IV. Online Content

26. Bleaching procedures

References

27. Endodontic records and legal responsibilities
